PREFACE

This report, formerly published bimonthly by the GMAIC Deployment Working Group (DWG) in mimeograph form, has been expanded to include additional data. It will continue to be published bimonthly in this new format.

Dissemination of the report was previously limited to holders of the DWG report, Soviet Surface-to-Surface Missile Deployment. Because the information contained herein is both supplemental and self-sustaining, distribution will no longer be limited to holders of the above report.

The current format provides a comprehensive, ready reference listing of all ICBM, IRBM, and MRBM deployment locations, types of site configurations, photographic references, estimated construction and operational status, and other evaluations of the DWG. Additional data may be added to future revisions.

A0000417

INTRODUCTION

This report is the seventh revision of Evaluations of Soviet Surface-to-Surface Missile Deployment prepared by the Deployment Working Group of the Guided Missiles and Astronautics Intelligence Committee. The sixth revision, dated 1 April 1963 and disseminated under control number TH-1472-63KH (A0000417), should be destroyed in accordance with existing instructions for handling TALENT-KEYHOLE material.

25X1

Mission [redacted] has provided additional information on the construction timing and pace of the Soviet missile deployment program which is reflected in the estimates and operational status shown in Tables 2 and 3. A new ICBM complex with one hardened launch site has been identified near Olovyannaya in the Soviet Far East, bringing the total number of deployed complexes to 18. A total of 76 ICBM sites (150 launchers) has been identified to date at these 18 deployed complexes. Of this total, about 108 are considered to be operational. See Figure 1 for locations of deployed ICBM complexes. Four basic ICBM launch site configurations (see Figure 2) have been identified and are characterized as follows:

25X1

Good-quality photography reveals that deployed Type III ICBM sites and Complex D at Tyura Tam contain three silos. From photography it is judged that two silos are in fact launch silos but the function of the third silo cannot be positively determined.

25X1

25X1

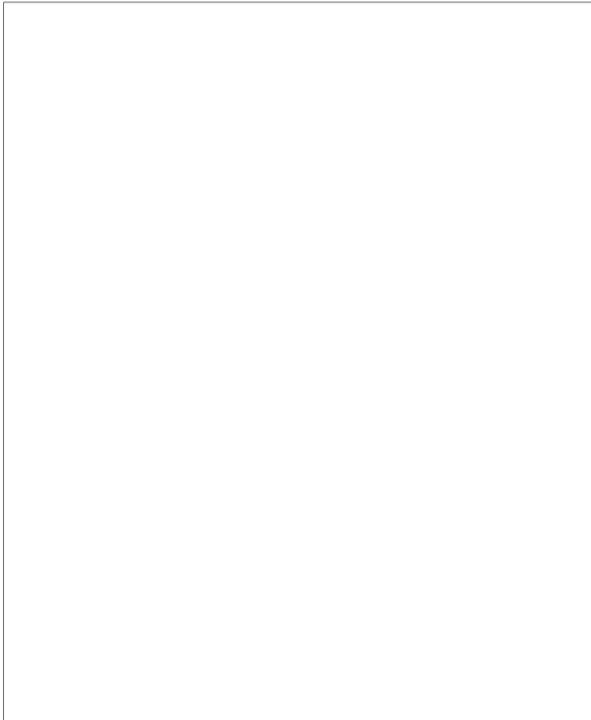

*The USAF, DIA, and NSA members of GMAIC believe that there are three configurations of this type, and all have similar, common identifying characteristics. They assert that the Type IV site listed above is the third mode of the Type II soft, road-served site.

**See Navy footnote, P. 3.

Page Denied

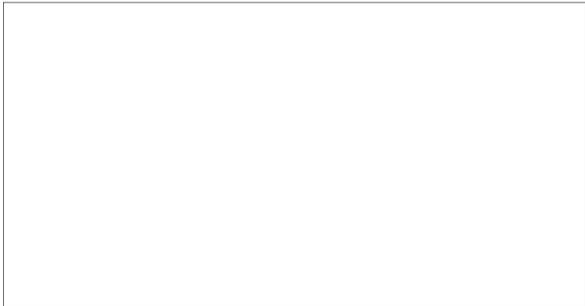

TOP SECRET DINAR CHESS RUFF

25X1

Therefore, considering all evidence, we conclude that a Type III launch site more likely contains 3 launch silos than the two previously reported.*

25X1

25X1

A0000417

Eight new launch sites (16 launchers) were identified in [redacted] They are located at the following complexes:

DROVYANAYA

Launch Site C Type II (Mod ?)
Launch Site D Type II (Mod ?)

OLOVYANNAYA

Launch Site A Type III

YEDROVO 1

Launch Site E 6 Type III
Launch Site F Type II (Mod ?)
Launch Site G Type II (Mod ?)

VERKHNYAYA SALDA

Launch Site H Type II (Mod ?)
Launch Site I Type II (Mod ?)

1 (NOTE: Launch Site C, Yedrovo, has been re-assembled at a Type III site as a result of [redacted])

Of the eight new sites identified, six are Type II sites of an undetermined mode. A preliminary analysis indicates that their configuration resembles a combination of C2 and C3 at Tyura Tam. Until a detailed photographic analysis is completed, the six launch sites will be listed as Type II sites of an undetermined mode.

A preliminary analysis indicates that Omsk Launch Site A, a hardened site, is different from hardened Type III sites and may be related to Launch Area F at Tyura Tam. Pending receipt of further evidence we will continue to carry Omsk Launch Site A as a Type III site.

Launch Site B at Omsk has been re-evaluated as a result of [redacted] and is now judged to be only a possible site. The two launch pads previously carried at Omsk Launch Site B have been deleted from the tabulation (Table 2).

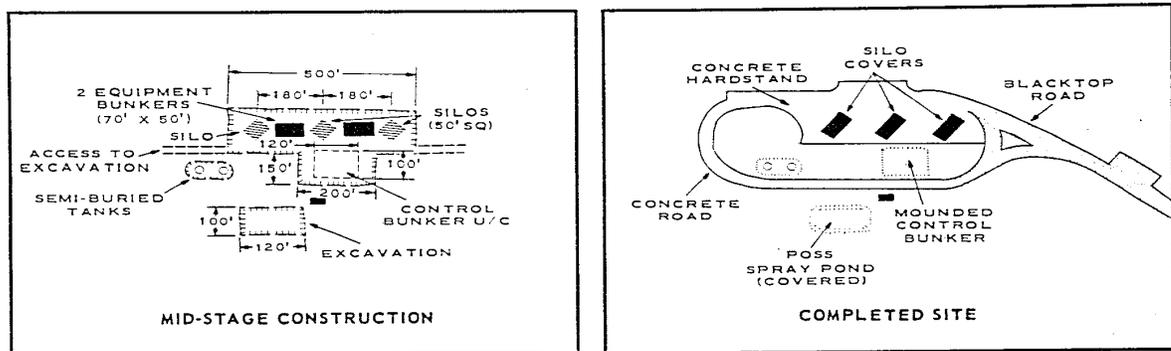

FIGURE 3. TYPICAL TYPE III ICBM CONFIGURATIONS

NPIC H-2098 (6/63)

A total of 130 soft MRBM sites (520 launch pads) and 12 soft IRBM sites (48 launch pads) have been identified to date. These totals include one new confirmed site at Belomorsk, one new probable site at Gvardeysk, and two new possible sites at Lakhdempokhaya and Kishentsy near Uman. Thirty-three hardened MRBM/IRBM sites (66 launchers) have been identified to date, including three newly identified hardened launch sites at Buynaksk and one probable hard site at Nigrande. Locations of deployed MRBM/IRBM complexes are depicted in Figure 3. The four basic MRBM/IRBM site configurations are presented in Figure 4. Three soft MRBM sites (Kraskino, Rozhdestvenka, and Ugolnyy) have characteristics of both the soft elongated-pad MRBM and IRBM sites. These sites have been designated as MRBM sites since most of the characteristics favor the MRBM.

In this report, one site name has been changed by the DWG to incorporate the name carried in the Target Data Inventory (TDI).

This change is as follows:

Launch Site No 3 at Kivertsy is changed to Trostyanets.

Due to analyses by several agencies, Type IV MRBM/IRBM sites have been variously reported to have two, three, or four launch silos. A detailed study undertaken to resolve this question has resulted in our conclusion that all Type IV launch sites probably have two launch silos. The third silo could possibly be a launch silo but is more likely a personnel and equipment access silo. A fourth object appearing at some launch sites, and reported as a silo by some agencies, has been determined to be an aboveground structure, the purpose of which has not been determined.

It should be noted that all suspect locations are subject to continuous review. When sufficient evidence warrants an assessment of possible or higher, a suspect location will be included in revisions to Soviet Surface-to-Surface Missile Deployment (TH 0747-62KH),

dated 1 January 1962. When a location has been evaluated as negative by the DWG, all evidence including KEYHOLE photography will continue to be reviewed for deception, new construction, and unrecognized configurations. The evaluations assigned are based on the latest data and are subject to change as new evidence is made available. Accordingly, this report

will be revised bimonthly to reflect additions or changes in evaluations.

Although some of the locations listed in Table 4 may have some functional relationship to the Soviet missile program, the assessments are limited to launching facilities. Only major differences in assessments are listed in footnotes.

TABLE 1. SUMMARY OF ESTIMATED STATUS OF IDENTIFIED ICBM AND MRBM/IRBM LAUNCHERS AT DEPLOYED COMPLEXES 1/

Type	Number	Operational	Under Construction	Type	Number	Operational	Under Construction
ICBM				MRBM/IRBM			
I	4	4	0	I	312	312	0
II	94	70	24	II	208	196	12
III	30	12	18	III	48	40	8
IV	22	22	0	IV	66	48	16
Total	150	108	42	Total	634	596	38

1/ See Tables 2 and 3 for details. Figures do not include a third launch silo at Type III ICBM sites.

**The operational status assigned to the Type IV sites is based on an estimated construction period of 12-15 months. Lack of good quality photography has precluded a positive determination of their current status. Therefore, when good quality photography is available the status of construction, and the operational readiness date may require changing.

1/ Confirmed cruise missile facility.

2/ ASM Test Range.

3/ Cruise missile site.

4/ Missile-related R & D facility

5/ Possible cruise missile facility

6/ Possible cruise missile launch site.

7/ Cruise missile launch site.

8/ ABM R & D facility.

9/ Cruise missile launch site.

10/ MRBM firings confirmed - no fixed sites in KH photography.

11/ Two cruise missile launch sites.

12/ Referred to as Ugolnyy in some documents. Since Beringovskiy was formerly known as Ugolnyy, the DWG has selected Ugolnyy Kopi as the correct place name for this MRBM/IRBM site.

13/ Space tracking facility.
